SUMMARY

A dedicated Computer Science student with a strong foundation in Data Structures and Algorithms. Skilled in Java programming and experienced in solving coding problems efficiently. Built full-stack applications using Java, React, Spring Boot, and MongoDB, and gained real-world development experience through two software development internships. Experienced in containerizing applications with Docker and deploying them on Render and Vercel.

SKILLS

Languages: Java, JavaScript, HTML, CSS

Frameworks & Libraries: React, Spring Boot

Databases: MySQL, MongoDB

Tools: Git/GitHub, Docker, Postman

Deployment: Vercel, Render

Relevant Coursework: DSA, DBMS, Operating Systems, Computer Networks, OOP

Problem Solving: 150+ problems solved on LeetCode (leetcode.com/u/yuthika2005), 100+ on GeeksforGeeks (geeksforgeeks.org/profile/msyuthjwqi)

EDUCATION

Bachelor of Engineering, Computer Science and Engineering *2023 – 2027*
Government College of Engineering, Erode | CGPA: 8.01

INTERNSHIP EXPERIENCE

Software Development Intern | Jayapriya Group of Companies, Neyveli *Jun 2026*

- Redesigned an existing company web page's UI using HTML and CSS.
- Built an Employee Directory web application using PHP and MS SQL Server.
- Developed an Android Leave Management System using Java, XML, and SQLite.
- Deployed and tested work directly on the organization's live production server.

Software Development Intern | NLC India Limited, Neyveli *Apr 2026 – May 2026*

- Built the Employee Promotion Management System, a web application using PHP, Oracle Database, HTML, CSS, and JavaScript.
- Delivered the completed system to the department, where it is currently in active use.

PROJECTS

Event Tracking System | Full-Stack Web Application | GitHub *Jan 2026*

- Built a web-based Leave/OD request system with a multi-level approval workflow (Advisor → HOD → Principal), using Spring Boot and React.
- Automated email notifications and real-time request-status tracking.
- Built a student dashboard with pie-chart visualization and a leave-limit bar (15-day cap) for usage transparency.
- Dockerized the frontend and backend using Docker and Docker Compose, and deployed the application on Render and Vercel.

Online Car Marketplace Platform | Full-Stack Web Application | GitHub *Dec 2025*

- Built the frontend with HTML, CSS, JavaScript, and React, and backend REST services with Spring Boot.
- Implemented OAuth-based authentication for secure user access.
- Enabled real-time chat between buyers and sellers using Socket.IO.
- Used MongoDB for efficient NoSQL storage of dynamic car listings, keeping data flow structured and UI performance optimized.

CERTIFICATIONS

- Programming in Java — NPTEL, completed with 91% (2025)
- Introduction to Front-End Development — Meta, Coursera (2024)
